

TRAN HA ANH DUY

0823 069 390 - trananhduydl@gmail.com - github.com/trAnhDuy204 - Ho Chi Minh City, Viet Nam

OBJECTIVE

Final-year Computer Science student at OU with a strong foundation in backend systems, distributed computing, and database design. Seeking a Backend Engineering internship to apply academic knowledge in building scalable, production-grade systems - while deepening hands-on experience in system design and software architecture under the guidance of experienced engineers.

TECHNICAL SKILLS

Programming Languages: JavaScript/TypeScript, Java, C++, SQL

Frameworks: React.js, Node.js, Express, Spring Boot

Databases: PostgreSQL, MySQL, SQLite, SQL server

Tools & Platforms: Git/GitHub, Docker, Linux, Android Studio, Postman, VS Code, junit

Concepts: Data Structures & Algorithms, OOP, REST APIs, Unit Test

Languages: Vietnamese (Native), English (reading and understanding documents)

EDUCATION

Ho Chi Minh Open University (OU)

2022 – Present

Final-year of Computer Science

Ho Chi Minh City, Viet Nam

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Computer Networks, Software Engineering, OOP.
- Actively participate in programming competitions organized by school and faculty.

PROJECTS

Job Searching Website

Jun 2025 – Sep 2025

Role: Full-stack Developer

https://github.com/trAnhDuy204/job_searching_website

- Designed and built a full-stack job search platform with 3 user roles (candidate, employer, admin), implementing REST APIs using Node.js/Express following MVC architecture.
- Implemented real-time messaging between candidates and employers using **Socket.io**, triggered automatically on application submission and review actions.
- Developed a job auto-expiry system using **node-cron** to automatically update expired job listings at midnight.
- Load testing with Jmeter, Average response time is 3-6 ms and throughput is 120 req/s for 200 users.

Cloud Storage App

Oct 2025 – Dec 2025

Role: Full-stack Developer

<https://github.com/trAnhDuy204/cloud-storage-app>

- Built a self-hosted cloud storage web app inspired by Seafile, supporting file upload, storage management, and user access control.
- Integrated **Google OAuth 2.0** for authentication and **Stripe** payment gateway for subscription-based storage plans.
- Containerized the full stack (Next.js frontend + Node.js backend + PostgreSQL) using **Docker Compose** for consistent local and production environments.

Hotel Management System

Feb 2026 – Apr 2026

Role: Team Leader

<https://github.com/trAnhDuy204/KTPM-252>

- Collaborated in a team to build a hotel booking platform with 3 user roles (customer, receptionist and admin).
- Owned authentication & authorization module - implemented JWT-based login, registration, and role-based access control (RBAC) for all 3 roles.
- Designed the full PostgreSQL database schema and managed the team's Git workflow and source control on GitHub.
- Integrated VNPay payment gateway for deposit transactions and wrote the overall test plan, test cases, and test report.
